

# Life Cycle of a Gannet

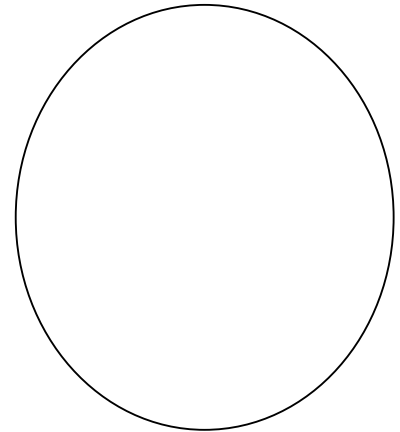

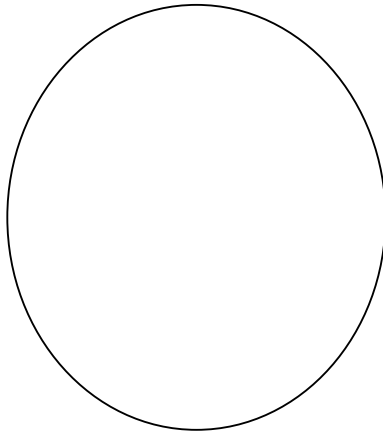

Make a sketch in each circle and complete the captions using these words:

**February**      **egg**      **white**      **fluffy**      **nest**

The female lays one small, white \_\_\_\_\_.

**The  
Life Cycle  
of a  
Gannet**

The adults will come back to their nest in \_\_\_\_\_.

At five weeks old the huge chick is white and \_\_\_\_\_.

At twelve weeks the chick is black with \_\_\_\_\_ spots. It is ready to leave the \_\_\_\_\_.

# The Life Cycle of a Puffin

Cut out the pictures and the sentences. Arrange them to make a **diagram** showing the **life cycle** of a puffin.

They make a burrow and lay one large white egg.

The adult puffins return to their island home.

It stays in the burrow for seven weeks. Then it is able to drop into the sea and take care of itself.

After about forty days a fluffy brown puffling is hatched.
